

Trojan Electric Tracking Vehicle Specifications – 3x Available

The Trojan Elite is virtually silent, making it the ideal vehicle when recording sound or filming in an indoor space as it produces no fumes. It is capable of tracking at low speed and up to 50Kmh.

The Independent Fully Adjustable Air Suspension can carry 3 crew members plus the precision driver, as well as having a good payload for equipment, Camera Cranes, and remote heads. Our Trojan Elite No.1 is centre drive making it ideal for carrying a wide range of Camera Cranes including a Scorpio 10' and GF-8. (Please contact us regarding the full list of cranes we can carry on the Trojan Elite).

Its low line of sight makes it unobtrusive and can be easily hidden in flowing traffic.

The left-hand driving position of our Trojan 2 and 3 allows the camera to be easily rigged for POV shot from the passenger seat, using our multi drilled cheese plate with M12 threaded holes.

The vehicle is equipped with scaffold rails that double as rigging points for camera and lighting. As well as coming with complete platforms all round that can be adjusted to three different heights.

The Trojan is also road registered and driven by one of our Precision Tracking Drivers
