

Lightning F150 Tracking/Plate Vehicle

The "Lightning F150" is designed for higher speed and or lower camera lens height plate shot requirements. It is compact, manoeuvrable, with superb handling and features high acceleration and deceleration. Powered by a V8 Supercharged engine, ideally suited for circuit or higher speed camera tracking work.

The rear work area has been constructed to give a much lower achievable camera lens height, making it ideal for drivers/passengers POV profile plate shots. It is fitted with Scaffold Rigging Points, Front, Rear, Sides and Roof for quick and easy camera rigging. Cameras and Remote heads can be mounted anywhere on the "Lightning F150" with ease. We can supply a "Post" Rig to take camera remote heads, this can be supplied in various heights and is adjustable for fixed positions.
