

Video Pursuit 1- GMC Playback/Tracking Vehicle Specification

The Video Pursuit Vehicle has been designed to allow the video playback and the DIT department to become mobile. This means that not only does this remove the need to set up and strike the video village numerous times throughout the shoot days, but it also allows the video village to move instantly, and if required it can track alongside the action while shooting- Driven by one of our precision tracking vehicle drivers.

This vehicle also allows wireless remote gyro-stabilised heads to be mounted on a separate tracking vehicle to be operated from the video pursuit vehicle, whilst remaining close to the action, preventing wireless link drop out.

The GMC Video Pursuit can comfortably seat 6 crew (plus the driver). With seating, monitor mounting facilities and if required a 240V power supply can be offered via our mounted generator.

This vehicle also has climate control, enabling it to cope with both hot and cold locations ranging from Iceland to Tenerife.
