

## NITROGEN AIR RAM

Nitrogen/Air Ram is used for throwing stuntmen through the air after a pyro explosion. It is used instead of a Trampoline and it is a very controlled method. Our company manufactures the Nitrogen/Air Rams and we have just introduced our Mark 5 version, which is more efficient, far easier and safer to operate. **Available for Sale or Hire at a sensible price**  
The Air Ram can be fired by the foot pressure switch or a hand-held switch.
